PATENT PATENT 20 52 85013-306980

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re application of: Chihei KITAHARA

Serial No.: 10/728,149

Filed:

December 4, 2003

For: ELECTRONIC SYSTEM HAVING ELECTRONIC APPARATUS FOR BUILT-IN HEAT GENERATING COMPONENT AND COOLING APPARATUS TO COOL THE ELECTRONIC APPARATUS

Confirmation No.: 9880

Date of Notice of Allowance:

October 5, 2005

Group Art Unit: 2835

I hereby certify that this correspondence is being deposited with the United States Postal Service with sufficient postage as first class mail in an envelope addressed to: MAIL STOP 16, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450, on November 7, 2005.

Roger (R) Wise, Reg. No. 31,204

REQUEST FOR REFUND

MAIL STOP 16 Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Dear Sir:

An Office Action dated May 24, 2005 was issued for the above-referenced application.

The due date to respond to the office action was on August 24, 2005. A response was submitted on September 21, 2005 together with a Petition for Extension of Time. However, instead of submitting a Petition for Extension for One Month, the applicant's attorney inadvertently filed a

- 1 -

PATENT ---- 85013-306980

Petition for Extension of Time for Three Months and paid the extension fee of \$1,020.00, instead of \$120.00, which is the extension fee for one month. The extension fee of \$1,020.00 was charged to the undersigned attorney's deposit account as can be seen in the USPTO Deposit Account Statement. The following documents are enclosed for your reference:

- X Office Action dated May 24, 2005.
- X Amendment in Response to the Office Action
- X Petition for Extension of Time for Three Months.
- X USPTO Deposit Account Statement.

In this regard, the undersigned respectfully requests for a refund in the amount of \$900.00 (the difference between \$1,020.00 and \$120.00) to be credited to Deposit Account Number 16-1805.

Respectfully submitted,

PILLSBURY WINTHROP SHAW PITTMAN LLP

Dated: November 7, 2005

Application/Control Number: 10/728,149

Art Unit: 2835

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 14, 16-18 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Behl.

The portable apparatus would be 12 having a heat generating component (not shown) inherently therein with a slot 20 with a first connector (not shown) inherently therein with the sot 20 receiving a cooling module having an electric fan, cooling device 38 with a second connector 32 connected to the first connector of the apparatus 12 to supply fan, device 38 with power (col. 4, lines 63-64). The fan 38 would be connected (broad term) by air flow (thermally) from fan 38 across the component and electrically since when the computer operates as discussed in col. 4, lines 63-64 the fan 38 would be electrically connected (broad term) to the overall computer apparatus circuit diagram path or pattern in which the component is electrically interconnected to provide computer operation.

Regarding claim 16, the second connector 32 having 68 contact pins which would be composed of metal received in standard metal sockets or openings in the first connector would be thermally connected since leads 40 of fan 38 which would be composed of conductive metal, copper would naturally conduct heat on their length to the pins and metal sockets.

Application/Control Number: 10/728,149

Art Unit: 2835

PAIEUL HOME ANDE Page 3

255 177 12 13 5 5 22

2. Claim 15 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The art does not teach nor suggest a second connector such as 83 in fig. 3 of the application coupled to sink 71 and exposed outside the apparatus.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gregory Thompson whose telephone number is (571)272-2045. The examiner can normally be reached on Monday-Thursday from 6:00am to 4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lynn Feild, can be reached on (571)272-2800, ext. 35. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

AMENDMENT/RESPONSE TRANSMITTAL

Transmitted herewith is an amendment/response for this application.

EXTENSION OF TIME

The proceedings herein are for a patent application and the provisions of 37 C.F.R. 1.136 apply. Applicant petitions for a 3 months extension of time under 37 C.F.R. 1.136.

FEES

The fee for claims and extension of time (37 C.F.R. 1.16 and 1.17) has been calculated as shown below:

	CLAIMS REMAINING AFTER AMENDMENT	PRE	IEST NO. VIOUSLY ID FOR		RESENT EXTRA	R	ATE		DDIT.
TOTAL	10		20	=	0	X \$	50.00	=	\$ 0.00

<u>AMENDMENT</u>

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Dear Examiner Thompson:

In response to the May 26, 2005 Office Action, for which the due date for response has been extended to September 26, 2005 pursuant to the enclosed Petition for Extension of Time, please enter and consider the following amendment and remarks in connection with the above-identified application.

IN THE CLAIMS:

Please amend the claims as follows:

- 1-14. (Cancelled)
- 15. (Currently amended)

A cooling apparatus, detachably coupled with a portable electronic apparatus

having a heat generating component and a first connector to supply power, to cool said

heat generating component, comprising:

a cooling module having an electric fan and being connected to said heat generating component when coupled with said portable electronic apparatus; and

a second connector, electrically connected to said electric fan, being connected to said first connector when coupled with said portable electronic apparatus to supply said electric fan with the power received from the first connector;

The cooling apparatus according to claim 14, wherein said cooling module includes a heat sink thermally connected to said heat generating component when coupled with said portable electronic apparatus and is cooled by said electric fan, and said second connector is coupled to said heat sink and is exposed outside the cooling apparatus.

16. (Currently amended) A cooling apparatus, detachably coupled with a portable electronic apparatus having a heat generating component and a first connector to supply power, to cool said heat generating component, comprising:

a cooling module having an electrically-driven cooling device and being connected to said heat generating component when coupled with said portable electronic apparatus; [and]

-2-

a heat sink thermally connected to said heat generating component; and a second connector electrically connected to said cooling device and thermally... connected to said first connector when coupled with said portable electronic apparatus to supply said cooling device with the power received from the first [fist] connector[.]; wherein said second connector is coupled to said heat sink.

17. (Currently amended) A cooling apparatus, comprising: a cooling module, having an electric fan, adapted to couple with a portable electronic apparatus having a heat-generating component and a first connector to supply power, [and]

a heat sink thermally connected to said heat-generating component; and a second connector, electrically connected to said electric fan, being connected to said first connector when coupled with said portable electronic apparatus to supply said electric fan with the power received from the first connector[.]:

wherein said second connector is coupled to said heat sink.

(Currently amended)

A cooling apparatus, comprising: a cooling module, having an electrically-driven cooling device, adapted to couple with a portable electronic apparatus having a heat generating component and a first connector to supply power; [and]

a heat sink thermally connected to said heat generating component; and a second connector, electrically connected to said cooling device, being connected to said first connector when coupled with said portable electronic apparatus to supply said cooling device with the power received from the first connector[.]; wherein said second connector is coupled to said heat sink.

18.

19. (Previously presented) A cooling apparatus, detachably coupled to an electronic apparatus having a first heat sink thermally connected to a heat generating component and a first connector to supply power provided in the first heat sink, and which cools the heat generating component, said cooling apparatus comprising:

a second heat sink thermally connected to the first heat sink when coupled to the electronic apparatus;

an electronic fan to supply cooling air to the second heat sink; and
a second connector provided in the second heat sink, the second connector
being electrically connected to the electronic fan, and being brought into connection
with the first connector to supply power to the electronic fan when coupled with the
electronic apparatus.

- 20. (Previously presented) The cooling apparatus according to claim 19, wherein the second heat sink has a heat receiving portion thermally connected to the first heat sink, and the second connector is provided in the heat receiving portion.
- 21. (Previously presented) The cooling apparatus according to claim 19, wherein the first connector and the second connector each have terminals supplied with a signal to control rotation of the electronic fan.
- 22. (Previously presented) The cooling apparatus according to claim 19, wherein the first connector and the second connector each have terminals supplied with a signal to recognize mutual coupling of the electronic apparatus and the cooling apparatus.
- 23. (Previously presented) The cooling apparatus according to claim 19, further including an apparatus main body on which the electronic apparatus rests, the

second heat sink being movable between a thermal connection position which is projected from the apparatus main body and is thermally connected to the first heat sink, and a housing position which is contained within the apparatus main body, wherein when the second heat sink moves to the thermal connection position, the second connector is electrically connected to the first connector, and when the second heat sink moves to the housing position, an electrical connection between the second connector and the first connector is disengaged.

24. (Previously presented) The cooling apparatus according to claim 23, further including an operation mechanism to move the second heat sink to at least one of the thermal connection position and the housing position, and a switch to close a circuit to connect the second connector and the electric fan when the second heat sink moves to the thermal connection position, and to open the circuit when the second heat sink moves to the housing position, the switch being opened and closed by the operation mechanism.

<u>REMARKS</u>

Claims 15 - 24 are pending. Claim 14 has been cancelled and claims 15-18 have been amended. No new matter has been introduced.

In the May 26, 2005 Office Action, the Examiner rejected claims 14 and 16-18, and objected to claim 15. Claims 19-24 were added by a Preliminary Amendment, but not addressed in the May 26, 2005 Office Action.

In the May 26, 2005 Office Action, the Examiner stated that the art does not teach nor suggest a second connector such as 83 in Fig. 3 of the application coupled to sink 71 and exposed outside the apparatus. The Examiner stated that Claim 15 would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Applicant has rewritten claim 15 to be in independent form including all limitations of claim 14, and therefore submits that claim 15 is allowable.

Applicant has amended claims 16-19 to recite limitations similar to amended claim 15. Specifically, these claims now recite a heat sink thermally connected to said heat generating component ... wherein said second connector is coupled to said heat sink. Thus, Applicant submits that claims 16-19 are also allowable.

On September 8, 2005, Applicant's attorney had a telephonic interview with the Examiner. The Examiner indicated that he would create an interview summary for the file. In the interview, the Examiner indicated that the art does not teach or suggest a second heat sink thermally connected to the first heat sink when coupled to the electronic apparatus and a second connector provided in the second heat sink, the second connector being electrically connected to the electronic fan, and being brought

PATENT 085013-0306980

into connection with the first connector to supply power to the electronic fan when coupled with the electronic apparatus, as recited by independent claim 19. Therefore, Applicant respectfully submits that independent claim 19 distinguishes over the cited art.

Dependent claims 20-24 depend, directly or indirectly, from independent claim 19. Therefore, Applicant respectfully submits that dependent claims 20-24 distinguish over the cited art for the same reasons discussed above in regard to independent claim 19.

PATENT 085013-0306980

Applicant believes that the foregoing remarks place the application in condition for allowance, and a favorable action is respectfully requested. If for any reason the Examiner finds the application other than in condition for allowance, the Examiner is requested to call either of the undersigned attorneys at the Los Angeles telephone number (213) 488-7100 to discuss the steps necessary for placing the application in condition for allowance should the Examiner believe that such a telephone conference would advance prosecution of the application.

Respectfully submitted,

PILLSBURY WINTHROP SHAW PITTMAN LLP

BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked:

BLACK BORDERS

IMAGE CUT OFF AT TOP, BOTTOM OR SIDES

FADED TEXT OR DRAWING

BLURRED OR ILLEGIBLE TEXT OR DRAWING

SKEWED/SLANTED IMAGES

COLOR OR BLACK AND WHITE PHOTOGRAPHS

GRAY SCALE DOCUMENTS

LINES OR MARKS ON ORIGINAL DOCUMENT

REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY

IMAGES ARE BEST AVAILABLE COPY.

☐ OTHER: ____

As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.
